

Running the VB.Net Email Example

Overview

This project shows the basic usage of generating a report and attaching it to an email using .Net Mail. The project is set up to use Gmail by default and all you need to do is enter your Gmail password and account name to get the sample working.

Requirements

- Woodward Reports .Net Engine
 - Available from <http://www.windward.net/downloads.php>
 - [Installation Tutorial](#)
 - Visual Studio
-

Tutorial

Step One: Open the Email Project

1. Open Catapult. (Found under Start -> All Programs -> Woodward Studios -> Woodward Reports .Net Engine -> Catapult - Woodward Sample Programs)
2. In the Catapult Menu, click the VB.NET Email Tab. It will open a Visual Studio solution

Step Two: Run the code

1. Type in your email information at the specified place in the code.
2. On the toolbar on the top of the Visual Studio window, click the Debug icon.
3. The code will run in a command line, and then automatically close.
4. The report will be sent to an email address specified
