

# Running the C# Basic ASP.NET Example

---

## Overview

This shows how to use Windward Reports in a C# ASP.NET application. Each ASP.NET example has been coded to work with a particular data source (Example: SQL, XML, etc.). The examples will open a Visual Studio solution.

---

## Requirements

- Windward .NET Engine
  - Available from <http://www.windward.net/downloads.php>
  - [Installation Tutorial](#)
- Visual Studio

---

## Tutorial

### Step One: Open the Project

1. Open Catapult. (Found under Start -> All Programs -> Windward Studios -> Windward .NET Engine -> Catapult)
2. In the Catapult Menu, click the C# Basic ASP.NET Tab.
3. Choose a data source to open its ASP.NET example. It will open a Visual Studio solution

### Step Two: Run the code

1. On the toolbar on the top of the Visual Studio window, click the Debug icon.
2. A button will appear. Click it and the report will be run and displayed in the browser.
